No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                              The present sequence is a parvovirus non-structure protein 1 (NS1) variant (T363A) DNA fragment. The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytocoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-NUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a DNA encoding parvovirus non-structure protein (NS1) variant (T463A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytocoxidity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vociors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

The present sequence is a DNA encoding parvovirus non-structure protein (NS1) variant (T363A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cyclocoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene

Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a DNA encoding parvovirus non-structure protein (NS1) variant (T394A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

The present sequence is a wild type DNA encoding parvovirus non-
structure protein 1 (NS1). The present invention relates to the variants
of the parvovirus non-structure protein (NS1) having a shifted
equilibrium between the DNA replication and transcription activities, and
the cytotoxicity activity. These variants are useful as toxins for
treating tumoural diseases. The variant DNAs are useful as vectors for
gene therapy. (Updated on 06-NUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                   9

                                                                                                                                                                                                                                              Polypeptide obtd. by recombinant DNA methods - for vaccination against parvovirus infections in man and animals.
                                                                                                                                                                                                                                                                                                                                 The inventors claim an immunologically active polypeptide for the development of vaccinal immunity against parvovirus infection. Also claimed are DNA sequences wholly or partly duplicative of defined sequences. The polypeptides are used in vaccines for conferring protection against parvovirus infections in man and animals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a DNA encoding parvovirus non-structure 1 protein (NS1) variant (S283A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                            Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

trenuated viruses are obtained by serial passage of the virulent.

type 2b isolate 39 in NLFK feline kidney host cells. They have one or more of the sequence alterations indicated in the sequence relative to the sequence of a control (5th passage) wild-type CPV-2b (see AAT88320).

A claimed virus from the 65th passage (deposited as ATCC VR 2528)

Contains all 6 mutations. The DNA from attenuated CPV strains (see also which, in turn, can be transfected into cells to generate master stocks which, in turn, can be transfected into cells to generate master stocks of the virus. The attenuated viruses can be used in dogs as a vaccine to protect against CPV disease, or more generally in cats and minks to protect against feline panleukopenia virus and mink enteritis virus. The vaccines protect against the currently prevalent CPV-2b type (and all extant strains of types 2 and 2a), providing a long term immune response. (NB. this sequence was created by adaptation of the wild-type CPV-2b.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1357 CTACAACATGTCAAATTTTTAGAATGCACGGATGGAATTGGATTAAAGTTTGTCACGCT 1415

passaging (60 times) of virulent canine parvoirus (CPV) type 2b isolate 39 in NLFK feline kidney host cells. The attenuated virus is designated velials (ATCC VR 2489). It contains 4 mutations relative to the sequence (see AAT88320) of the control (5th passage) wild-type CPV-2b. 2 Mutations are within the hairpin formed by the 3' terminal palindrome: the mutation at nucleotide 59 introduces an A into a G-C rich region within the tip of the hairpin, disrupting the base pairing in one of the 2 small internal palindromes within the palindromes within the palindrome. The DNA from attenuated CPV strains (see also AAT88321) is used for the production of infectious molecular DNA clones, which, in turn, can be transfected into cells to generate master stocks of the curson. The attenuated viruses can be used in dogs as a vaccine to protect against CPV disease, or more generally in cats and minks to protect against the currently prevalent CPV-2b type (and all extant strains of types 2 and 2a), providing a long term immune response.

(Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                     Canine parvovirus DNA carrying specific attenuating mutation(8) - used as vaccines for protection against parvovirus and feline pan-leukopenia virus infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1357 CTAĞAACATGTCAAATTTTTAGAATGCACGGATGGAATTGGATTAAAGTTTGTCACGCT 1415

The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORFs) of the genome encode polypeptides AAY36734-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, pepidymitis, cervicits, alpingitis, perihepatitis, barkholinitis, peneumopathy in breast feeding infants; and venereal lymphogramulomatosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  38590 AGAGCATGTAGATCTTTTACGAGTAGGGCCTCGCAATATGCAAAATTTTGTCTTGCT 38646

                                                                                                                                                                                                                                                                                                                                          This DNA sequence comprises the genome of virulent canine parvovirus type 2D (CPV-2b) isolate 39, obtained after 5 serial passages in NLFK feline kidney host calls. Purther passaging has yielded attenmated virus wB1440 (ATCC VR 2489) (see AAT88324) from the 60th passage, and a claimed virus C see AAT88321) derived from the 65th passage (ATCC 2528). These crespectively contain 4 and 6 mutations in comparison to the virulent 5th passage virus. The DNA from attenuated CPV-2b strains is used for the production of infectious molecular DNA clones, which, in turn, can be transfected into calls to generate master stocks of the virus. The attenuated viruses can be used in dogs as a vaccine to protect against CPV disease, or more generally in cats and minks to protect against felline panleukopenia virus and mink enteritis virus. The vaccines protect against felline panleukopenia virus and mink enteritis virus. The vaccines protect gainst cypes 2 and 2a), and provide a long term immune response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /clone_lib="WGS-ZmaysF (DHSa methyl filtered)"
/note="Organ: immature ears; Site_1: Xba I; Site_2: Xba I;
The vector was digested with Xba! and one nucleoride was added by fill in the recessive 3' end. The ganomic DNA was nebulized, end repaired, adaptor ligated and size fractionated using sephadex. The resulting fragments were between 0.8 and 3 kb and ware cloned into the vector (:x/y reads in Mi3mply. .b/g reads in pUCl9). The same ligation was transformed into DHSa."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Aaron M. Zorn.
cDNA was oligo dT primed from 5ug of poly A+ RNA from neurula.
BCoRI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the 3' end and NotI at the 3' end.

Sanger Xenopus tropicalis EST project 2001
TROPICALIS_ENGUENCE ID: TTPA031m22.qlkT7
Sequencing primer: T7
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Nigel Garrett.
cDNA was oligo dT primed from 5ug of poly A+ RNA from tadpole
embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 with
EcoRI at the 5' end and NotI at the 3' end.
Vector: pCS107; Site_1: EcoRI; Site_2: NotI
Host: Escherichia coli DB108.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note="Vector: pGSI07; Site_1: EcoRI; Site_2: NotI; cDNA was oligo dT primed from Sug of poly A+ RNA from tadpole embryos. Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

Disclosure; Page 19; 41pp; English.

The present sequence is a peptide fragment of parvovirus non-structure protein 1 (NS1) variant (T363A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the

```

```
The present sequence is parvovirus non-structure protein 1 (NS1) variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (T394A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                               NS1; non-structure protein 1; cytostatic; gene therapy; toxin; therapy; tumoural disease; gene therapy; mutant; mutein; variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Parvovirus.

Synthetic

```
The present sequence is a parvovirus wild-type non-structure protein 1 (NS1). The present invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NSI; non-structure protein 1; cytostatic; gene therapy; toxin; therapy; tumoural disease; gene therapy; mutant; mutein; variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is parvovirus non-structure protein 1 (NSI) variant (T463A). The invention relates to the variants of the parvovirus non-structure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The inventors claim an immunologically active polypeptide for the development of vaccinal immunity against parvovirus infection. Also claimed are DNA sequences wholly or partly duplicative of defined sequences. The polypeptides are used in vaccines for conferring protection against parvovirus infections in man and animals. (Updated on 24-OCT-2003 to standardise OS field)
                                                                                       The present sequence is parvovirus non-structure protein 1 (NSI) variant (S283A). The invention relates to the variants of the parvovirus nonstructure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence encoded by the double-stranded replicative form DNA of porcine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polypeptide obtd. by recombinant DNA methods - for vaccination against parvovirus infections in man and animals.
                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polynucleotides are also used and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for generation expression of their traits to assess blodiversity and to cid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

Novel recombinant nucleic acid encoding proteinaceous molecule, useful for producing flavor, fragrance and/or biocontrol agent which is useful as food additive in processed food industry and as antimicrobial agent.

Disclosure; Page; 52pp; English

recombinant isopremoin activities compound synchesis incience actu and its protein have the following activities; pesticide, dermatological, cytostatic, immunosuppressive, and virucide. The novel recombinant isopremoid bio-active compound synthesis mucleic acid is useful for producing flavour, fragrance, and/or a bio-control agent, by transforming or transfecting a suitable host with the recombinant isopremoid bio-active compound synthesis mucleic acid in the presence of a suitable substrate, and optionally isolating the formed product. The bio-control agent is useful as an anti-incrobial agent, as a food additive in the processed food industry to modify the taste of syrups, ince-creams, frozen desserts, yogurts, confectionery and like products, as a flavouring agent for oral medications and vitamins, and for providing additional flavour/aroma in beverages, including alcoholic beverages. The bio-control agent is also useful for enhancing or reducing flavour, control agent is also useful for the industrial synthesis of nature identical flavour/aroma substances and/or artificial flavour/aroma substances and/or artificial flavour/aroma substances and/or artificial flavour/aroma substances and/or artificial flavour/aroma in control of the interaction between plants and insects and/or plants and microorganisms, for providing flavour/aroma in products, hair conditioners, cleaning products, personal care products and health care products, as cell products and health care products, as conditions and in the preparation of a composition. The novel fracmatic in the preparation of a definition of the novel the products and health care products, and or its processed to the product of t acid is useful for the production of an antagonist e.g. an antibody or the first state of the production of an antagonist e.g. an antibody or the first state of the superior of an antagonist e.g. an antibody or the bio-control agent, useful for augmenting the synthesis of the aroma and/or taste of food or non-food products, and/or protection of food or non-food products against fungal contamination and/or prest infestation. The composition is also useful for the biological control of pests, for the protection of stored products and for the prevention or treatment of disease. The bio-control agent is useful as a degreasing solvent, plasticizer and dye carrier. The composition is useful for replacing potentially carrinogenic synthetic food additives currently capable of isoprenoid bio-active compound synthesis when provided with a suitable substrate under appropriate reaction conditions. The novel recombinant isoprenoid bio-active compound synthesis nucleic acid and its fragments is useful as a molecular marker or diagnostic tool. The protein of the novel recombinant isoprenoid bio-active compound synthesis nucleic replacing potentially carcinogenic synthetic food additives currently used. The composition is also useful for treating dental caries, dental plaque and skin disorders, and for immunosuppressive, anti-leukaemia and The invention relates to a novel isolated or recombinant nucleic acid or encoding a proteinaceous molecule essentially functional fragment,

```
The invention relates to a novel isolated or recombinant nucleic acid or capable of isoprenoid bio-active compound synthesis when provided with a suitable substrate under appropriate reaction conditions. The novel recombinant isoprenoid bio-active compound synthesis mucleic acid and its protein have the following activities; pesticide, dermatological, cytostatic, immunosuppressive, and virucide. The novel recombinant isoprenoid bio-active compound synthesis nucleic acid and its producing flavour. Iragarance, and virucide. The novel recombinant producing flavour. Iragarance, and/or a bio-control agent, by transforming or transfecting a suitable host with the recombinant isoprenoid bio-active compound synthesis nucleic acid, expressing the recombinant
                compound synthesis nucleic acid or its protein is useful for the synthesis of monoterpene alcohol linalool and sesquiterpene alcohol nerolidol, and monoterpenoid. This sequence represents an H64 protein used in the terpenoid biosynthesis method of the invention. NoTE: This sequence is not shown in the specification. It has been obtained from electronic data supplied with this specification from the European Patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  isoprenoid bio-active compound synthesis nucleic acid in the presence of

c suitable substrate, and optionally isolating the formed product. The bio-control agent is useful as an anti-microbial agent, as a food addustive in the processed food industry to modify the taste of Syrups, it is e-creams, frozen desserts, yogurts, confectionery and like products, and control agent for oral medications and vitamins, and for providing additional flavour/aroma in beverages, including alcoholic beverages. The bio-control agent is also useful for enhancing or reducing flavour, aroma substances and/or artificial products, and for the industrial synthesis of nature or artificial products, and for the industrial synthesis of nature constitutions. The biological control agent is also useful as a pest control agent control agent is also useful as a pest control agent control of the interaction between plants and insects and/or plants and microorganisms, for providing flavour/aroma in consensities, oreams, un-products, and readitioners, cleaning consensities, creams, sun-products and health care products, as a molecular marker or diagnostic cool. The protein crecombinant isopremoid bio-active compound synthesis nucleic acid is useful for the production of a composition. The novel crecombinant isopremoid bio-active compound synthesis of the bio-control agent. A composition of an antibody or its functional equivalent which is useful for inhibiting the synthesis of the aroma and/or taste of food or non-food products, and don't pest the bio-control agent. A composition of a control agent is useful for the protection of stored products, and for the protection of stored products, and for the protection of stored products and for the biological control agent is useful for the protection of stored products and solution is a degressing creament, plasticiars and dye carrier. The composition is a degressing control agent is useful for the protection of stored products and suffice and stin ä compound synthesis nucleic acid or its protein is useful for the synthesis of monoterpene alcohol linalool and sesquiterpene alcohol natolidol, and monoterpenoid. This sequence represents an H64 protein used in the terpenoid biosynthesis method of the invention. NOTE: This sequence is not shown in the specification. It has been obtained from electronic data supplied with this specification from the European Patent Gaps Human, chromosome mapping, gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder. 8; Score 48; DB 7; Length 580; Pred. The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal ectivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbarrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anno acid sequences. Aggonolo-Abg30377 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at (IP) wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antisense; prokaryotic essential gene; cell proliferation; drug design.

The invention relates to an instance and compilating any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid encoding a propose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated continued by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway continued for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene product lies correspond that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sectivity; (11) a culture compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound sectivity; (11) a culture compound that inhibits the extent correction of an organism. The antisense nucleic acids are useful for proliferation of an organism. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for for entil and continued for rational action of an organism. The antisense modeled acids required for for entil and continued for rational activity and activity of a compound and antisense modeled activity of a compound and activity of a compound activity activity of a compound activity activity of a compound activity activity of a compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ä
                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chicken, sheep, immunosuppressive, antiarthritic, vasotropic, dog, antirheumatic, antiproliferative, cytostatic, cardiant, neuroprotective,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cardiovascular system antigen; human; mouse; rabbit; goat; horse; cat;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAU21852-AAU22466 represent the cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigens and their sesociated polymuclectides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbite, goats, horses, cats, dogs, chickens or sheep. A pathological condition. Cc can be determined by detecting the presence or a absence of a mutation in a cardiovascular system antigen polymuclectide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, cardiovascular disorders such as reoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as corneal infection, endocrine disorders such as as losefulorablicities can also be used to aid wound healing, to prevent skin aging due to sunburn, companial and process of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cardiovascular system related polypeptide; cancer; proliferative disorder; foetal abnormality; developmental abnormality; proliferative disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer; disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; endocrine disorder; pregnancy-related disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the cardiovascular system.

The invention relates to human cardiovascular system related polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies to the polypeptides are useful for diagnosing a and antibodies to the polypeptides are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular system tissues, proliferative disorders, foetal cand developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, cathorosclerosis, cardiovascular disorders, angiogenic disorders, atherosclerosis, cardiovascular disorders, angiogenic disorders, and infections. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and polymucleotides are also useful for chromosome identification, radiation hybrid mapping or long-range capabilities, fat content or other mutritional components. This sequence represents a human cardiovascular system
                                                                                                                                                       New cardiovascular system related polynuclectides and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular tissues and cancer metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2;
